

# Greenfields

GREENFIELDS is the ideal "Conservation" mixture

- 30% Creeping Red Fescue
- 27% Team Jr Tall Fescue
- 15% Aubisque Perennial Ryegrass
- 15% Richmond Timothy
- 10% Kentucky Bluegrass
- 3% Dutch White Clover

GREENFIELDS is the ideal "Conservation" mixture. It can be used to provide an excellent ground cover for land in a holding pattern, wildlife cover, erodable slopes, around ponds and ditch banks. It can be left unmowed or cut 2 or 3 times annually. Once established, it requires little or no fertilizer. Intersperse some patches of wildflowers for an enhanced appearance. The combination of durable and persistent grasses with clover produces this symbiotic, long-lived and attractive ground cover, and it is economical too.

Large conservation and industrial areas, roadsides, and natural park areas. If required, it can be mowed or cut for hay once or twice per year.

- Land reclamation
- Wildlife cover
- Erodible slopes
- Around ponds
- Ditch banks

Will not tolerate mowing heights less than 5 cm.

- 170-200kg/hectare (160-180lbs/acre)
- Spot Application: 1.75-2.0 kg/100m<sup>2</sup> (3.85-4.0 lbs. /1,000ft<sup>2</sup>)
