

SMARTER WAYS TO WORK

FINN Additive System™ HydroMax

HYDROMAX

DESCRIPTION

FINN HydroMax is a proprietary blend of compounds that enhance the early stages of plant development from germination to viable maturity. Finn HydroMax is consistent of natural plant growth hormones and vitamins which stimulate earlier germination and root development. Each of these compounds performs a specific function corresponding to the greatest biological need at the time. HydroMax is organic, biodegradable, non-polluting, non-toxic, non-volatile and does not impair existing vegetative growth. Recent research in our labs has led to breakthroughs in stabilizing chemistry that have allowed this special blend to exist synergistically in one jug. HydroMax is a combination of Finn HST, Finn MB and Finn HG. This combination simplifies the Finn Additive System because it is all of the benefits of three products in one jug.

APPLICATION & RATES

AVAILABLE NUTRIENTS / EARLY GERMINATION.....5 GALLONS PER ACRE

PRODUCT REQUIREMENTS

HYDROMAX IS NOT A FERTILIZER NOR SHOULD IT BE USED TO TAKE THE PLACE OF A FERTILIZER. IT HAS SOIL AMENDMENT QUALITIES TO PROMOTE EARLY GERMINATION.

PACKAGING

5 GALLON CASE (2-2.5 GALLON JUGS)
